

UNIFIED CARRIER LICENCE
TELECOMMUNICATIONS ORDINANCE (Chapter 106)

New World Telecommunications Limited (NWT) hereby publishes the following tariff pursuant to its Unified Carrier Licence with immediate effect.

Name of Tariff

International MPLS IP-VPN Service

Description of Tariff

Multi-protocol Label Switching (MPLS) is the latest state-of-the-art technology for connecting customer sites in different locations. The main concept of MPLS is to assign short, fixed-length labels on each IP packet. The core network service router performs switching based on these labels to determine where and when data should be forwarded.

Through network based IP-label-switching function, different classes of IP packets can be switched and prioritized according to the application requirements. Such switching methods allow maximum network performance and easy scalable service.

With direct connections to overseas point of presences and interconnection with major international carrier partners, NWT's MPLS IP-VPN service covers all major cities in Greater China and other cities in over 150 countries. Besides, NWT's IPsec remote access and SSL remote access allow business travellers and remote users to access the IP-VPN securely from anywhere in the world.
